

# UC Pro

## Skype for Business Integration

Two areas of Skype for Business integration are available through the UC Pro PC client when installed on a PC that is also running the Skype for Business client.

Although most of the call control is still done through the UC Pro client, the Skype for Business user can make calls either from the UC Pro client, or using the "Call using desk phone" option within the Skype for Business client. If "Update Skype for Business state when on a call" is checked in the UC Pro PC client configuration, the Skype for Business client's status will be automatically set to "in a call" when the handset makes or receives a call, or "do not disturb" when the handset goes to DND.

## UC Pro Client Technical Information

### Infrastructure

Architecture	UC Pro client is installed on the end user PC which makes a connection to the Skype for Business client installed on the same PC. A UC Pro Server is required for the UC Pro client to connect to as normal.
Licenses required (for each user who requires the functionality)	Any Skype for Business CAL Any UC Pro PC client e.g.: Express, Extra, Fusion

### Call control

Answer handset	From UC Pro Preview (pop-up) window.
Call Forward handset	From UC Pro client.
Transfer call	From UC Pro client.
Make Call	From Skype for Business client or UC Pro client.

### Status update

Skype for Business Client - "In a call"	When the handset makes or receives a call.
Skype for Business Client - "Do not disturb"	When the handset goes to DND.

## Microsoft Active Directory Integration

Directory integration allows UC Pro users to be created directly from users already defined in Microsoft Active Directory. This feature is particularly powerful when used in conjunction with UC Pro 's enhanced client security enabling fast deployment of secured UC Pro user accounts. The UC Pro user accounts will also be auto-populated with both internal and external numbers defined in Microsoft Active Directory. This is very beneficial for clients that make use of DDI numbers such as the UC Pro Mobile client.

Directory integration can also work the other way, that is, telephone numbers defined in UC Pro can populate Microsoft Active Directory.

Please note: This feature does not update the extension names on the telephone system.

## Microsoft Exchange Calendar Integration

Microsoft Exchange calendar integration allows a user's availability and absence greeting to be updated directly from the Microsoft Exchange server. Microsoft Exchange calendar integration will update a user's availability and absence greeting regardless of the status of their UC Pro client.
